EDUCATION

University of South Carolina – Columbia, SC

May 2028

Bachelor of Science in Computer Science

GPA: 3.7

- Honors and Awards: President's List, Larry and Pat Wilson Scholarship recipient (\$4,000), Jon H. Poteat Scholarship recipient (\$1,000).
- Relevant Coursework: Software Engineering, UNIX/Linux Fundamentals, Digital Logic Design, Advanced Programming Techniques, Algorithmic Design.

SKILLS

Programming Languages: Python, Java, C++, C, JavaScript, TypeScript, SQL, Bash

Technologies: Git, GitHub, Linux, Docker, JUnit, Next.js, JavaFX, Vercel, SCRUM, Figma, Lucidchart, Excel

Spoken Languages: Spanish (Native), English (Fluent)

EXPERIENCE

Center for Industry Solutions

Columbia, SC

Computer Science Intern

November 2024 – Present

- Developed a program using Boston Dynamics' Spot SDK to enable autonomous thermal inspections with a FLIR A700 camera, improving efficiency in industrial monitoring.
- Debugged and resolved complex operating system issues, ensuring reliability in robotic and machine learning workflows.
- Applied machine learning and artificial intelligence techniques to real-world industry projects, strengthening data-driven problem-solving skills.
- Achieved GitHub certification, demonstrating version control expertise and collaborative software development proficiency.

PWMARKET.NET

Remote

Founder

March 2024 – June 2024

- Built and deployed a custom Discord bot to process over 2,000 customer orders, streamlining marketplace operations.
- Automated payment workflows, reducing transaction time and error rate while supporting multiple payment methods.
- Grew platform revenue to \$20,000+ in 6 months by optimizing sales funnels and customer engagement strategies.
- Increased sales by 35% through adaptive tech solutions and expanded payment integrations.

PROJECTS

SC-Economics Donation Portal | Stripe, Next JS, TypeScript

Columbia, SC

UI/UX Programmer

Fall 2025

- Led the Stripe payment integration, implementing secure one-time and recurring donation functionality and managing 100+ session-based transactions in testing and production environments.
- Developed and maintained the payment management system, improving transaction reliability and reducing donation flow errors through better session handling and validation logic.

Robot Control Interface | C++, UML, Figma, LVGL

Columbia, SC

UI/UX Programmer

Spring 2025

- Designed and implemented a custom UI to streamline PID tuning for the robotics team, reducing manual code adjustments by ~60% and improving configuration speed by 40% through intuitive sliders and buttons.
- Integrated JSON-based data storage with PROS and the VEX V5 Brain, automating parameter updates and standardizing testing workflows across 5+ robots, improving setup consistency and debugging efficiency.

ARPEGGIO | Hashing, Encryption, Two-Factor Authentication, SCRUM

Columbia, SC

Project Manager

Spring 2025

- Directed the implementation of advanced security protocols including hashing, salting, peppering, and encryption to ensure data integrity and protect user credentials from common attack vectors.
- Led development and integration of search algorithms and two-factor authentication (2FA), improving system usability and adding an extra layer of access security.
