EDUCATION

University of South Carolina – Columbia, SC

May 2027

Bachelor of Science in Computer Information Systems

Minor in Business Information Management

GPA: 3.84/4.0

- Honors and Awards: SC LIFE Scholarship (\$5,000), Gamecock Guarantee Grant (\$5,500), Dean's List - All Semesters & President's List - Spring 2025

SKILLS

Programming: Java, JavaScript, HTML/CSS, C++, Python(Intro) | **Development Tools:** Git/GitHub, Docker, Linux CLI

Cloud/DevOps: Scrum/Scrum Master, GitHub Actions | **Security:** Kali Linux, Nmap, Netcat

RELEVANT COURSEWORK

Algorithmic Design I & II

Advanced Programming Techniques (C++)

Software Engineering

Intro to Computer Networks

Discrete Math for Computer Science

Intro to Computer Security

WORK EXPERIENCE

University of South Carolina

Columbia, SC

Teaching Assistant - Software Engineering

January 2026 - Present

- Hold twice-weekly meetings as **Scrum master** for **5 student teams** building semester-long applications, tracking sprint progress, resolving blockers, and ensuring equitable task delegation using GitHub projects and insights.
- Evaluate and grade design-pattern-focused **Java** assignments for **100+ students**, delivering structured feedback on code quality, pattern implementation, and **GitHub** usage.
- Review and critique **UML** diagrams and system designs, guiding students in applying object-oriented principles and aligning implementations with scalable architecture practices. Additionally field general student questions.

Publix

Columbia, SC

Cashier, Produce Clerk

April 2020 - Present

- Resolved customer issues in real time, applying structured problem-solving and clear communication under pressure.
- Managed high-volume transactions and resolved customer issues with efficiency and professionalism.

PROJECTS

Lingua Franca: AI Inspection Routing Tool | Backend & Data Extraction Lead

2nd place; February 2026

- Worked with a team to build an **AI**-powered inspection routing MVP that converts unstructured multi-format inputs into structured JSON data for automated prioritization. MVP was created during Hackathon
- Engineered a file intake and preprocessing pipeline using **Python** and Streamlit, OpenCV, and PyTesseract to normalize and extract text from image-based documents.
- Integrated **Mistral (via Ollama)** to transform noisy **OCR** output into structured, machine-readable data.
- Implemented PDF and Excel parsing using PyPDF and OpenPyXL, enabling ingestion of varied document formats.

Software Engineering Course Project - Game Development | Team Lead & Developer

September - December 2025

- Led a 5-member team using Agile/Scrum methodology to design and implement a **Java**-based backend. Engineered modular, scalable Java components to improve maintainability and support parallel development across the team.
- Prototyped a front-end UI in **Figma**, incorporating user testing and iterative refinement to improve usability.
- Oversaw version control, sprint planning, and progress tracking via GitHub to reduce merge conflicts and keep development on schedule. Additionally developed linking **JavaFX** controllers.

Cybersecurity Club | Kali Linux CTF & Docker Environment

December 2025

- Built and configured a **Kali Linux** virtual machine within a Dockerized environment.
- Conducted Capture the Flag (CTF) challenges using *nmap*, *netcat*, and *shell scripting*.
- Gained hands-on experience with penetration testing fundamentals, privilege escalation, and network scanning.
